GanttControl Installation Guide for Delphi

This Installation guide shows how to install the GanttControl VCL Demoverision on your Delphi development environment.

Step 1

Uninstall any previously installed GanttControl (WeiseGanttSuite) components:

- In Delphi, go to Component - Install Packages menu. From design-time packages list select WeiseGanttSuite and click Remove. Go to Tools - Environment Options - Library page, and remove the WeiseGanttSuite directory from library path.

Step 2

Shut down Delphi and other applications.

Step 3

Download and extract the GanttControl.Zip to a desired installation directory.

Step 4

Start Delphi

- In Delphi, go to **Component | Install packages | Add...** . Select GanttSuiteVCL_D7, GanttSuiteVCL_D2005 or GanttSuiteVCL_D2006 according to your Delphi Version
- Set the library path in Delphi: Go to **Tools | Environment options | Library** and add to library path the path you have installed the component.
